

TABLES AND FIGURES

TABLES	1.1	Our first regression, revisited	26	
	1.2	Our first regression, revisited for the second time	27	
	1.3	Our first regression, revisited for the third time	27	
	1.4	Our first regression, revised	30	
	1.5	Our first regression, revised for the second time	31	
	2.1	Wage and salary income in 1999 for eight individuals (in dollars)	41	
	2.2	Two components of income for eight individuals (in dollars)	46	
	2.3	Components of income for eight individuals (in dollars)	55	
	2.4	Components of annual housing costs for eight individuals (in dollars)	56	
	3.1	Hypothetical data	64	
	3.2	Sample covariance calculation with hypothetical data	65	
	3.3	Sample covariance calculation with actual data	65	
	3.4	Data with a zero sample covariance	67	
	3.5	Sample variance calculations with hypothetical data	77	
	3.6	Child mortality rates and water availability by country	79	
	3.7	Census schooling levels and approximate years of schooling	84	
	4.1	Regression calculation for the sample of table 3.1	117	
	4.2	Predicted values and prediction errors for the regression in table 4.1	118	
	4.3	Rooms and rent	121	
	4.4	R^2 calculation, rooms and rent	122	
	4.5	Hypothetical data	133	
	5.1	Simulated data	161	
	5.2	Fifty simulated regressions	162	
	5.3	Fifty regressions on Census data	165	
	5.4	Effect of sample size on the range of estimates for simulated data	180	

5.5	Effect of sample size on the range of estimates for Census data	182
6.1	Hypothesis tests: Actions and consequences	217
6.2	Contrasts between confidence intervals and hypothesis tests	226
7.1	Two methods to estimate the standard deviation of b	239
7.2	95% confidence intervals for β in 50 simulated regressions	244
7.3	Effect of sample size on the width of 95% confidence intervals for simulated data	246
7.4	Effect of sample size on the width of 95% confidence intervals for Census data	247
7.5	Simulated distributions of x_i for table 5.4	249
7.6	Effect of variation in x_i on the width of 95% confidence intervals for simulated data	249
7.7	Effect of variation in x_i on the width of 95% confidence intervals for Census data	250
7.8	Effect of sample size on the width of 95% confidence intervals for \hat{y}_0 in the simulated data of table 5.1	265
7.9	Effect of differences in x_0 on the width of 95% confidence intervals for \hat{y}_0 in simulated data	267
7.10	Gross national income per capita and corruption by country in 2002	271
8.1	Simulated regressions with zero and nonzero values for $E(\varepsilon_i)$	286
8.2	OLS on a simulated pooled sample with low and high disturbance variances	309
8.3	OLS on a simulated sample with a high disturbance variance	310
8.4	OLS on a simulated sample with a low disturbance variance	311
8.5	WLS on a pooled sample with low and high disturbance variances	312
8.6	White's heteroscedasticity test applied to Census data	317
8.7	Stratified regressions for the sample in table 8.6	317
8.8	WLS applied to Census data	318
10.1	OLS regressions on six simulated samples with known measurement error	375
10.2	Theoretical and actual OLS bias due to measurement error	376
10.3	2SLS regressions on six simulated samples with known measurement error	380
10.4	IV estimators with $n = 100,000$ and different degrees of measurement error	387
10.5	IV estimates of β when $V(v_i) = 4$ and sample size increases	389
10.6	Population standard deviations for b and asymptotic standard deviations for b_{IV}	391

10.7	Population standard deviations for b and asymptotic standard deviations for b_{IV}	392
10.8	Estimated standard deviations for b and b_{IV} in simulated data	392
10.9	Sample correlations and IV estimates with weak instruments	394
10.10	Hausman test for endogeneity in simulated data	397
12.1	Correlation between x_{1i} and x_{2i} and the population standard deviations of b_1	465
12.2	Sample size and the population standard deviation of b_1	466
12.3	Multicollinearity and slope estimates	467
12.4	Correlation between x_{1i} and x_{2i} and estimated standard deviations of slope estimates	470
12.5	Sample size and estimated standard deviations of slope estimates	470
12.6	R^2 and adjusted R^2 from restricted and unrestricted regressions	475
12.7	Test of the null hypothesis $H_0: \beta_1 = 0$ and $\beta_2 = 0$	480
12.8	Effects of an irrelevant explanatory variable	486
13.1	Predicted earnings from equation (13.62)	527
14.1	Earnings regressions stratified by sex, sample from chapter 1	558
14.2	Abbreviated earnings regressions stratified by sex, sample from chapter 1	560
14.3	Earnings regressions stratified by sex, sample from section 7.6	562
14.4	Earnings regressions stratified by sex, sample from section 7.6	565
14.5	The regression of table 1.4, revisited	574
14.6	Earnings regressions stratified by minority status, sample from section 7.6	576
14.7	Earnings regressions stratified by sex, sample from chapter 1, omitting those with zero earnings	577
14.8	Abbreviated earnings regressions stratified by sex, sample from chapter 1, omitting those with zero earnings	577
14.9	Earnings regressions stratified by sex, sample from section 7.6, omitting those with zero earnings	578
14.10	Pooled earnings regression, sample from section 7.6	579
15.1	Determinants of the probability that earnings exceed \$50,000	604
15.2	Extended determinants of the probability that earnings exceed \$50,000	607
15.3	Determinants of the probability of working in 1999	608
15.4	Sample selection correction to table 1.5	611
A.1	Standard normal probabilities	629
A.2	t -distribution critical values	632

	A.3	F values for $\alpha = .05$	633
	A.4	Chi-square distribution	635
	A.5	Durbin-Watson critical values	636
FIGURES	1.1	Our first regression	6
	1.2	Potential effects of age on earnings	16
	1.3	Our first regression, restricted	19
	1.4	Our second regression	32
	3.1	Graph of data in 3.1	66
	3.2	Graph of $y = x^2$	67
	4.1	Example of a bad line	92
	4.2	Geometric distance from a point to a line	92
	4.3	Vertical distance from a point to a line	93
	4.4	Lines with identical sums of errors	94
	4.5	Line with nonzero average prediction errors	101
	4.6	Line with a positive correlation between X and the errors	103
	5.1	Distribution of slope estimates, simulated data	163
	5.2	Distribution of intercept estimates, simulated data	164
	5.3	Distribution of slope estimates, Census data	166
	5.4	Distribution of intercept estimates, Census data	166
	6.1	Density function for d^*	198
	6.2	$(1 - \alpha)\%$ confidence interval	200
	6.3	Two-tailed hypothesis test at $\alpha\%$ significance	205
	6.4	$P(t^{(19)} > .501)$	211
	6.5	Upper-tailed hypothesis test at $\alpha\%$ significance	214
	6.6	Two-tailed and one-tailed hypothesis tests with 20 observations	216
	6.7	Probability of a Type II error for an upper-tailed hypothesis test	219
	6.8	Effects of lower significance levels on the probability of a Type II error	222
	6.9	Reduced $SD(d)$ and the probability of a Type II error	224
	7.1	Probability of a Type II error for the Census data of table 3.3 with $H_0 : \beta_0 = 4,000$ and $H_1 : \beta_1 = 5,000$	259
	8.1	Sample with a small disturbance variance	292
	8.2	Sample with a high disturbance variance	292
	9.1	Random shocks for the sample of equation (9.9)	341
	9.2	Serially correlated disturbances for the sample of equation (9.9)	341
	9.3	Serially correlated disturbances created with fourth-order autocorrelation from the shocks of figure 9.1 with $\gamma = .9$	354

9.4	Serially correlated disturbances for the sample of equation (9.9), $\rho = .6$	357
9.5	Serially correlated disturbances for the sample of equation (9.9), $\rho = .3$	357
11.1	Predicting y_i with two explanatory variables	420
11.2	Predicted plane of equation (11.13)	421
15.1	Probability of income > \$50,000 for 16 years of schooling	586
15.2	$E(y_i)$ with two observations	587
15.3	$E(y_i)$ with three observations	588
15.4	Predicted probabilities for two different values of x_i	589
15.5	Changing the predicted probabilities for two different values of x_i	590
15.6	Marginal effect of a change in x_i when $-(a + bx_i)$ is close to zero	601
15.7	Marginal effect of a change in x_i when $-(a + bx_i)$ is far from zero	602
15.8	Contributions of ε_i to the likelihood function	617
15.9	Intersecting typologies of estimators	619
