

FIGURES AND TABLES

- Figure 1.1. Percentage of women's births resulting from unintended pregnancy, by mother's education 35
- Figure 1.2. Percentage of women who had a premarital conception before age 25, by education and cohort 36
- Table 1.1. Predicted averages or percentages for selected behaviors related to early or unintended childbearing, by mother's education 30
- Table 1.A.1. Predicted averages or percentages for selected behaviors related to early or unintended childbearing, by respondent's high school grade-point average 43
- Table 1.A.2. Predicted averages or percentages for selected behaviors related to early or unintended childbearing, by respondent's college status 43
- Table 2.1. Intended and achieved parity by educational level 56
- Figure 3.1. Percentage of women age 35 to 44 who had had three or more residential partnerships 74
- Figure 3.2. Percentage of women age 19 to 44 who had cohabited 77
- Figure 3.3. Percentage of births that occurred to cohabiting women under age 40 78
- Figure 5.1. Trends in the proportion of all births to unmarried couples 109
- Figure 5.2. Unmarried parents' relationship status at child's birth 112
- Figure 5.3. Trajectories in fathers' earnings by relationship status 120
- Figure 5.4. Trajectories in mothers' income by relationship status 122
- Figure 5.5. Trajectories in mothers' mental health problems by relationship status 123
- Figure 5.6. The association between partnership instability and mothers' stress, by education 127
- Figure 5.7. The association between partnership instability and mothers' literacy activities, by education 128

Table 5.1.	Parents' relationship quality at birth of their child	112
Table 5.2.	Percentage of unmarried couples with high levels of father involvement	113
Table 5.3.	Parents' attitudes toward marriage at birth of their child	114
Table 5.4.	Parents' demographic characteristics at birth of their child	116
Table 5.5.	Parents' human capital at birth of their child	117
Table 5.6.	Number of residential transitions by parents' baseline relationship status	119
Table 5.7.	Number of transitions at year 5 by parents' baseline relationship status	119
Table 5.8.	The association between changes in relationship status and changes in fathers' earnings, by year of change	121
Table 5.9.	Unmarried fathers' involvement with their children after a nonmarital birth	125
Table 5.10.	The association between family structure and stability and quality of mothers' parenting	126
Table 5.11.	The association between family structure and stability and child well-being	129
Figure 6.1.	Methodological details of study for "Unequal Childhoods" and follow-up study	137
Table 6.1.	Distribution of the 12 youth in the follow-up study, by social class and race	138
Table 6.2.	Selected life characteristics of intensive-study child participants, at age 20-21	140
Table 7.1.	Birth patterns of women and men by level of education	166
