Tables

1.1. Welfare index 0–10, by country 14
2.1. Question wordings for welfare support and perceived performance items 31
2.2. Results of multilevel analyses for support for government intervention in favor of the elderly (N = 38,478) and the unemployed (N = 37,963) 39
2.3. Results of multilevel analyses for perceived standard of living of the elderly (N = 38,478) and the unemployed (N = 37,963) 43
3.1. Perceived future risk by high-risk group (percentage) 68
3.2. Evaluation of country's social benefits and services by high-risk group (percentage) 69
3.3. Welfare attitudes toward the responsibilities of government by high-risk group, mean values 71
3.4. Path-analysis for high-risk groups in different welfare regimes 73
4.1. Model of lay conceptions of social order 87
4.2. Five measures of conceptions of social order, with descriptive statistics for overall sample 95
4.3. Multilevel analysis: Level 1 main effects of social positions and conceptions on welfare attitudes 100
4.4. Multilevel analysis: Cross-level interactions between conceptions and level 2 indicators on welfare attitudes 106
5.1. Support for the inclusion of immigrants: Country-specific response patterns (percentage of respondents within countries) 137

5.2. Determinants of welfare chauvinism (multinomial logistic multilevel models) 140
5.3. Macro-level determinants of supporting welfare chauvinism 143
5.4. Predicted mean probabilities to support welfare chauvinism 147
5.5. Predicted mean probabilities for a range of combinations with regard to key covariates 147
6.1. Class, age, gender, and attitudes toward income redistribution for Finland, 2008 171
6.2. Attitudes toward welfare policies in 26 European countries 172
6.3. Class and age differences in attitudes toward income redistribution for Denmark, Sweden, Poland, and Slovakia, 2002–2008 (standard deviations of coefficients (*K*)) 179
7.1. Experiments with target groups: Social benefits and services 204
7.2. Experiments with crisis/class frames: [Not] government's responsibility 206

Figures

1.1. A conceptual framework for analyzing attitudes toward welfare policies 21
2.1. Aggregate relationship between perceived standard of living (*x*-axis) and role of government (*y*-axis) for the elderly 35
2.2. Aggregate relationship between perceived standard of living (*x*-axis) and role of government (*y*-axis) for the unemployed 37
2.3. Country-specific effects of perceived standard of living of pensioners on welfare support in favor of the elderly, with 95% confidence intervals 47
2.4. Country-specific effects of perceived standard of living of the unemployed on welfare support in favor of the unemployed, with 95% confidence intervals 48
3.1. Conceptual model of the study 60
3.2. The studied paths in different welfare regimes compared to the rest of the population 72
4.1. Mediation model of welfare attitudes 93

4.2. Normative beliefs mediate the link between social position and welfare attitudes 101
4.3. Predicting government responsibility as a function of conceptions of social order across five welfare regimes 104
4.4. Cross-level interactions on government responsibility 107
6.1. Attitudes toward income redistribution policies 171
6.2. Income inequality and attitudes toward income redistribution policies 177
6.3. Old-age dependency ratio and attitudes toward labor market policies 178
7.1. Negative perceptions of *strain*, *laziness*, and *poverty* 208
7.2. Negative perceptions of *migration* and *costs* 209
7.3. Not government's responsibility: *Jobs*, *health care*, and *the old* 210
7.4. Not government's responsibility: *Unemployed*, *child care*, and *family leave* 211
