

CONTRIBUTORS

Richard V. Burkhauser is the Sarah Gibson Blanding Professor of Public Policy in the Department of Policy Analysis and Management, Cornell University, and a professorial research fellow at the University of Melbourne's Institute of Applied Economic and Social Research. He is a member of the National Bureau of Economic Research, a research professor of the German Institute for Economic Research (DIW-Berlin), and an adjunct scholar for the American Enterprise Institute for Public Policy Research. His professional career has focused on how public policies affect the economic behavior and well-being of vulnerable populations, e.g., older persons, people with disabilities, and low-skilled workers. He received his PhD in economics from the University of Chicago.

Kenneth A. Couch is a professor in the Department of Economics at the University of Connecticut. His research interests include the long-term impacts of life-course events such as job displacement and changes in family structure. He is an associate editor of the *Journal of Policy Analysis and Management*, and his recent work has been published in *Demography* and in the *American Economic Review*. He received his PhD in economics from the University of Wisconsin in 1992.

Mary C. Daly is associate director of research and group vice president at the Federal Reserve Bank of San Francisco. Ms. Daly's research spans public finance, labor economics, and public policy. She has published widely on issues related to employment, wages, income inequality, and disability policy. In her role at the bank, Mary supports the monetary policy function and serves as a system resource on issues related to employee retirement and health benefits. Ms. Daly previously served on the technical panel of the Social Security Advisory Board, and is currently a fellow in the National Academy of Social Insurance and a visiting scholar at the Congressional Budget Office. Ms. Daly joined the bank as an economist in 1996 after completing a National Institute on Aging postdoctoral fellowship at Northwestern University. She earned a PhD in economics from Syracuse University and a BS from the University of Missouri.

Thomas DeLeire is professor of public affairs and economics and director of the La Follette School of Public Affairs at the University of Wisconsin–Madison. He is also a research associate of the National Bureau of Economic Research. His research focuses on labor and health economics.

Henry S. Farber is the Hughes-Rogers Professor of Economics and an associate of the Industrial Relations Section at Princeton University. Professor Farber graduated from Rensselaer Polytechnic Institute (BS, 1972), the New York State School of Industrial and Labor Relations, Cornell University (MS, 1974), and Princeton University (PhD, 1977). In addition to his faculty position at Princeton, Farber is a research associate of the National Bureau of Economic Research (NBER) and a research fellow of the Institute for the Study of Labor (IZA). He is also a fellow of the Econometric Society, the Society of Labor Economists, and the Labor and Employment Relations Association. Before joining the Princeton faculty in 1991, Farber was a professor of economics at the Massachusetts Institute of Technology (1977–91). Farber's current research interests include unemployment, liquidity constraints and labor supply, labor unions, worker mobility, wage dynamics, and analysis of the litigation process.

Colin S. Gardiner was formerly a researcher at the Federal Reserve Bank of San Francisco but now works as a product developer for Pearl.com, a startup focused on making professional services available to everyone. His research interests include labor and social welfare policy.

Robert Haveman is John Bascom Emeritus Professor in the Department of Economics and the La Follette School of Public Affairs at the University of Wisconsin–Madison. He is also an adjunct professor at the Research School of Economics at Australian National University. His research interests focus on the economic well-being of the low-income population and the evaluation of public policy measures, especially in low-income housing and higher education. He also studies the patterns of well-being among the older population, including the impact of shocks to health on wealth and assets. Professor Haveman received a PhD in economics from Vanderbilt University.

Karen Holden is professor emeritus of public affairs and consumer science, University of Wisconsin–Madison. Prior to her retirement, she was also a research associate at the Institute for Research on Poverty and a steering committee member at the Center for the Health and Demography of Aging and the Center for Demography and Ecology. She was co-PI (with Michael Collins) of the Social Security Administration's grant (2009–11) to the Center for Financial Security, one of three national centers in SSA's Financial Literacy Research Consortium. The major theme of her work has been on how Social Security and employer-provided pensions influence retirement

timing and well-being after retirement and widowhood. Her current research includes an examination of the adequacy of retirement savings, the influence of early life cognition and school courses and grades on later life financial knowledge, differentials between men and women in voluntary retirement savings contributions, the influence of late life events on financial well-being, and children's understanding of financial concepts. She was an advisor to Sesame Workshop on a program (and DVD) teaching children about saving. While continuing with some research and teaching in retirement, increasingly her hours are spent playing music, including in an all-women Cajun band (see www.prairiebayoucajun.com). She received her BA in economics from Barnard College and her doctorate in economics from the University of Pennsylvania.

Andrew J. Houtenville is an associate professor of economics at the University of New Hampshire (UNH). He is also the research director of the UNH Institute on Disability and the director of the Rehabilitation Research and Training Center on Employment Policy and Measurement. He has written extensively about employment and program participation of working-age people with disabilities, with a focus on long-term time trends. He has also written extensively on the measurement of disabilities in the context of population-based surveys. He received his PhD in economics from UNH in 1997.

Michael D. Hurd is principal senior researcher and director of the RAND Center for the Study of Aging. His research interests include a wide range of topics in the economics of aging including retirement and the structure of private pensions and Social Security, the determinants of consumption and saving, the use of health care services, methods of assessing uncertainty in a population, bracketing and anchoring effects in the elicitation of economic information, and the relationship between socioeconomic status and mortality. He received his PhD in economics from the University of California, Berkeley.

Ariel Kalil is a professor in the Harris School of Public Policy Studies at the University of Chicago, where she directs the Center for Human Potential and Public Policy. She is a developmental psychologist who studies how economic conditions affect family well-being and behavior. Her work in this area includes studies of how job insecurity and job loss affect the health and well-being of older workers.

Juyeon Kim is a postdoctoral fellow of the Center on Aging at the University of Chicago and the National Opinion Research Center (NORC). She is a researcher for the first and second waves of the National Social Life, Health, and Aging Project (NSHAP). She is interested in the effects of social contexts, such as marital relationships, households, and social networks, on health

outcomes. Her recent work examines the effect of the economic downturn on living arrangements, and other work focuses on how size and the complexity of role relationships of social networks influence older adults' health including depressive symptoms and hypertension.

Joyce Manchester heads up the Long-Term Analysis Unit at the Congressional Budget Office. Her research focuses on responses to public policy among older workers and workers with disabilities. She holds a PhD from Harvard University.

Bruce D. Meyer is the McCormick Foundation Professor at the Harris School of Public Policy Studies at the University of Chicago. He was a faculty member in the economics department at Northwestern University from 1987 through 2004. His work has appeared in the *American Economic Review*, *Quarterly Journal of Economics*, *Econometrica*, *Journal of Labor Economics*, *Journal of Public Economics*, and other refereed journals. His book titles include *Making Work Pay: The Earned Income Tax Credit and Its Impact on America's Families* and *Strategies for Improving Economic Mobility of Workers: Bridging Research and Practice* (co-editor in both cases).

Amalia R. Miller is an associate professor of economics at the University of Virginia and an adjunct economist at the RAND Corporation. Her research interests are primarily in labor and health economics. She has studied the effects of fertility delay and contraceptive access on women's professional and educational outcomes and is researching the role of workplace peer effects on fertility decisions. Her current work in health economics explores the determinants of health information technology adoption and its impacts on health care costs and outcomes. She received a Ph D in economics from Stanford University.

Wallace K. C. Mok is an assistant professor of economics at the Chinese University of Hong Kong. He received his PhD from Northwestern University in 2009. He works on disability, compensation, and measurement error in surveys and has published in the *Journal of Human Resources*.

Jeremy G. Moulton is an assistant professor of public policy at the University of North Carolina, Chapel Hill. His research interests include the economics of aging and intergenerational transmission of wealth and education. He received a PhD in economics from the University of California, Davis.

John W. R. Phillips is an economist at the National Institute on Aging (NIA) Division of Behavioral and Social Research, where he serves as health scientist administrator for the Economics of Aging section as well as project scientist

for the Health and Retirement Study. Over the course of his career, he has published research on retirement, saving, and intergenerational resource allocation. His prior supervisory posts include director of the Social Security Administration (SSA) Office of Policy Research and chief of the Population and Social Process Branch at the NIA Division of Behavioral and Social Research. Earlier in his career he served as an economist and federal program officer at SSA conducting research on retirement and directing the Retirement Research Consortium program for SSA. He completed a two-year NIA postdoctoral research fellowship at the University of Pennsylvania, where he published work on early retirement, savings shortfalls, and intergenerational transfers. He received his PhD in economics from Syracuse University in 1997.

Gayle L. Reznik is an economist in the Office of Retirement Policy at the Social Security Administration. She earned her PhD in economics from Stony Brook University. Her current research interests include aging and retirement, Social Security, and life-course events. She has published in *Journal of Family and Economic Issues*, *The Gerontologist*, and *Social Security Bulletin*.

Jae Song is a senior advisor/economist at the Office of Quality Performance, Social Security Administration. His primary research interests are in the labor force activity of individuals with disabilities and their labor force exit behavior, work disincentive effects of Social Security programs, and earnings dynamics. He received a PhD in Economics from the State University of New York at Albany.

Ann H. Stevens received her PhD from the University of Michigan in 1995. Her research interests include the incidence and effects of job loss, understanding connections between economic shocks and health, and poverty dynamics. Stevens served on the faculty at Rutgers and Yale Universities prior to joining UC Davis in 2003. She has served as an investigator on several grants from the National Science Foundation, including a study currently underway to better understand the relationship between cyclical movements in unemployment and mortality. Stevens is also a faculty research associate with the National Bureau of Economic Research.

Christopher R. Tamborini is a senior research analyst in the Office of Retirement Policy at the U.S. Social Security Administration. He holds a PhD in sociology from the University of Texas at Austin. His current research interests include life course, family and marriage, aging and retirement, Social Security, and research methods. Recent publications include articles in *Journal of Marriage and Family*, *Social Forces*, *Sociological Methods & Research*, *Research on Aging*, *The Gerontologist*, and *Population Research and Policy Review*.

Jennifer R. Tennant is an assistant professor in the Department of Economics at Ithaca College. Previous to this appointment, she was a postdoctoral associate at Cornell University, a research assistant at the National Bureau of Economic Research, and an assistant vice president at Moody's Investors Service. Her areas of concentration are disability and mental health policy, labor force participation of vulnerable populations, and taxation issues. Current research topics include detailing how different definitions of disability are associated with different social success estimates for these populations, the effect of a change in government policy on the disability insurance participation of recent veterans, and the effect of the Great Recession on state and local finances. She received her PhD in economics from the Graduate Center, City University of New York, in 2006.

Till von Wachter is an associate professor of economics at the University of California, Los Angeles. He is a faculty research associate of the National Bureau of Economic Research, the California Center for Population Research, the Center for Economic Policy Research, and the Institute for the Study of Labor (IZA). He was also a visiting scholar at the Russell Sage Foundation in 2010 and 2011. He earned his master's degree in economics from the Economic University of Bonn, Germany, and his doctorate from the University of California, Berkeley. Von Wachter's current fields of interest include the long-term effects of job displacement on career and family outcomes, the labor market determinants of retirement and disability, and the effect of public programs such as disability insurance and unemployment insurance. Von Wachter is topic leader of the EPRN Unemployment Jobs Deficit/Growth research cluster, and has advised the U.S. Congress, the OECD, the World Bank, and the IMF on job loss and unemployment insurance.

Linda J. Waite is Lucy Flower Professor of Sociology and director of the Center on Aging at the University of Chicago and the National Opinion Research Center (NORC). Waite is the principal investigator for the National Social Life, Health, and Aging Project (NSHAP), supported by a MERIT Award to Waite from the National Institute on Aging. She is coauthor, with Frances Goldscheider, of *New Families, No Families: The Transformation of the American Home* (University of California Press, 1991), winner of the Duncan Award from the American Sociological Association. She is also coauthor, with Maggie Gallagher, of *The Case for Marriage: Why Married People are Happier, Healthier, and Better Off Financially* (Doubleday, 2000), which won the 2000 Outstanding Book Award from the Coalition for Marriage, Family, and Couples Education. She is past president of the Population Association of America. Her current research focuses on social connections at older ages and aging.

Geoffrey L. Wallace is associate professor of public affairs and economics at the University of Wisconsin–Madison. His research is in the areas of labor economics, the economics of marriage and the family, and policy issues relating to poverty. Current projects examine the effects of changing economic conditions on living arrangements among young people, the effects of competition on educational outcomes, and issues of child support enforcement. His research on educational outcomes includes a study of the effects of Milwaukee’s public school choice program on student achievement. Professor Wallace received his doctorate in economics from Northwestern University.

Robert J. Willis is a professor in the Department of Economics and a research professor in the Survey Research Center and the Population Studies Center of the Institute for Social Research at the University of Michigan. He has long-standing interests in the economics of the family including theoretical and empirical research on fertility, marriage, divorce and out-of-wedlock childbearing, education and earnings, intergenerational transfers, and the determinants of poverty among elderly widows. In the past decade, he has begun a new area of research on cognitive economics dealing with the relationship between cognitive ability and economic behavior. He received his PhD in economics from the University of Washington.

Barbara Wolfe is professor in the Departments of Economics, Population Health Sciences, and the La Follette School of Public Affairs at the University of Wisconsin–Madison. She also has an appointment at the Research School of Economics at Australian National University. Her research focuses on issues of importance for improving the situation of vulnerable persons including children in low-income families and persons with disabilities and in understanding the link between income and both health and cognitive abilities. She received a PhD from the University of Pennsylvania in economics.

Julie M. Zissimopoulos is a research associate professor in the Department of Clinical Pharmacy and Pharmaceutical Economics and Policy at the University of Southern California and the associate director of the Leonard D. Schaeffer Center for Health Policy and Economics. She specializes in the economics of aging. Topics of special interest are medical expenditures at older ages, savings and wealth, labor force behavior, and financial and nonfinancial support between generations of family members. She received her PhD in economics from the University of California, Los Angeles.
