### Figures

- Figure 1.1. First Chichimecs arrive in the basin of Mexico 19
- Figure 1.2. Map for land-grant request in the province of Cuautitlan, 1590 35
- Figure 1.3. Colonial-era Pila Real at San Juan Atlamica, 1926 37
- Figure 1.4. East margin of the Cuatitlan River, with Teoloyuca's inlet (canao), 1926 38
- Figure 1.5. Plan of the gates of the Canal of El Chiflón and Pila Real of Atlamica, 1927 38
- Figure 1.6. Teoloyuca's portion of water flowing from the outlet of the canoa 39
- Figure 1.7. Colonial-era pila in Teoloyuca 39
- Figure 1.8. Cuautitlan River's water distribution as seen by urban officials, 1763 40
- Figure 1.9. View of the Pila Real and the distribution of the Cuautitlan's water as seen by local users, 1756 41
- Figure 2.1. Enrico Martínez's 1608 "Description of the region of Mexico and the works of the drainage of the lake" 53
- Figure 2.2. Adrian Boot's understanding of the enclosed basin of Mexico before his arrival there 66

- Figure 2.3. Adrian Boot's (attributed) view of the basin after his arrival there: *Regionis circa lacum Mexicanus*, 1614 69
- Figure 3.1. Fray Andrés de San Miguel's translucent open trench 86
- Figure 3.2. Multiuse hoist 89
- Figure 4.1. Sobreestante Pedro Porras's 1677 plan for the dam at the Coyotepec silting pool 128
- Figure 4.2. Screw or spindle gate used in the Desagüe, 1850s 135
- Figure 4.3. Plants useful in earthworks 142
- Figure 5.1. Joseph de Páez's depiction of basin's hydrology and hydraulic works in 1753 158
- Figure 5.2. Francisco de Zúñiga y Ontiveros's view of the Desagüe proper, 1773 160
- Figure 5.3. Sebastian Fernández de Medrano's diagram of how to arrange fascine in fortifications works 178
- Figure 5.4. Materials for building a fortification's earthworks, tepes, fascine, and carts 179
- Figure 5.5. Spades for sod cutting and a handheld rammer used to stamp earth, fascine, sods, and other materials placed in earthworks 179
- Figure 5.6. Ramps, carts, and human work mobilized to extract debris and deposit it in the escarpment 184
- Figure 5.7. "Indian-dangling" method of work in 1755 185
- Figure 5.8. Jaime Franck's depiction of the Bóveda Descubierta 187
- Figure 5.9. The tunnel's problems: too high, too narrow, too silted 188
- Figure 5.10. Debris from the collapsed vault obstructing the tunnel 190
- Figure 5.11. The weak Techo Bajo section of the tunnel 190
- Figure 5.12. Adrian Boot's instructions to Bartolomé Bernal on how to read his plans for spillways on the causeways of Chapultepec and Sanctorum 193
- Figure 5.13. Luis Bouchard de Becours's usage of military engineering drafting conventions, 1705 195
- Figure 6.1. Ricardo Aylmer's view of the Desagüe, 1767 209

- Figure 6.2. Ricardo Aylmer's longitudinal and cross-sections of the Desagüe 212
- Figure 6.3. Joseph de Urrutia's view of the Desagüe, 1768 212
- Figure 6.4. Hoists used in the Rayas mines of Guanajuato since 1704 219
- Figure 6.5. State of the consulado's open trench conversion in 1773 221
- Figure 6.6. José Antonio de Alzate y Ramírez's illustrated proposal for an alternative drainage, 1767 224
- Figure 6.7. Why a "sump" drainage into cavities north of Lake Texcoco would not work, according to Ildefonso Iniesta Vejarano, 1764 227
- Figure 6.8. Joaquín Velázquez de León's projection of the level of Lake Texcoco on the open trench 235
- Figure 6.9. Velázquez de León's "Perfil longitudinal del desagüe general de la laguna de México," 1774 235
- Figure 6.10. Ignacio Castera's "Plan of the ground and profiles of the works in the Real Desagüe de Huchuetoca," 1789 237
- Figure 6.11. Three of Miguel de Costanzó's cross-sections of the Desagüe, 1788 238
- Figure 7.1. Haciendas, ranchos, and townships surrounding the Desagüe, 1775 251
- Figure 7.2. Mier's tunnel to drain Lake Zumpango, as imagined by Diego de Guadalajara, 1796 256
- Figure 7.3. Profile along the length of Guadalajara's 1796 tunnel project to drain Lake Zumpango 256
- Figure 7.4. Guadalajara's Canal de Guadalupe 260
- Figure 7.5. Mier and Guadalajara's "New Canal of Guadalupe" 260
- Figure 7.6. Ignacio Castera's "General map of the lakes that surround the City of Mexico," 1795 263
- Figure 7.7. Guarda mayor Francisco Power collecting and transmitting data from his subordinates in tabular form 274
- Figure 8.1. Four sectional cuts of the Canal de Guadalupe five years after completion 284

## Tables

Table 1. Lacustrine system of the basin of Mexico 18

Table 2. Maintenance obligations along the Cuautitlan River diversion dam 167

Table 3. Tributary counts and rates of population growth for the basin of Mexico and Cuautitlan province, 1720–1800 276

## Maps

Map 1. Basin of Mexico and its major hydraulic structures on the eve of the Spanish conquest 17

Map 2. Main features of the Desagüe proper and its district, 1608–1767 52

Map 3. The Desagüe from Mier's reforms to the end of Spanish rule 254
