

Figures, Maps, and Table

Figures

1.1	China's "black" face: Buildup of thermal power	12
1.2	China's "green" face: Buildup of wind power	13
1.3	China's green and black energy revolution	14
2.1	Growth of per capita income, England, 1200–2000	22
2.2	Real prices of wood and coal in London, 1400–1800	27
2.3	Fossil fuels and industrialization of the United States	28
2.4	Global uptake of fossil fuels	29
2.5	Increasing rates of human activity since the Industrial Revolution	31
2.6	Major world economies' fluctuations over the past two thousand years	36
2.7	China's and India's looming oil gap	39
2.8	Global price of coal, 2001–2012	41
3.1	Plateauing of global (conventional) oil supplies	57
3.2	Carbon dioxide and methane levels over the past thousand years	61
3.3	Measured temperature increase, 1860–2000	62
3.4	China: Projected carbon emissions from power generation, 2000–2040	66
4.1	Wind- and nuclear-generated electricity in China, 1995–2012	82

4.2	Industrial dynamics of electric power capacity in China, 2000–2040	84
4.3	Photovoltaic module experience curve, 1976–2011	106
5.1	Emergence of circular economy linkages	124
5.2	Industrial symbioses in Guitang Group, China	126
5.3	Industrial symbioses in Kalundborg, Denmark	127
6.1	Global financial assets, 1990–2012	139
7.1	Emergence of a sixth techno-economic paradigm	156
7.2	Spectral analysis of Kondratiev waves, 1870–2010	161
7.3	Systemic technological transitions following logistic industrial dynamics	168
8.1a	Neoclassical view of the economy in relation to nature	188
8.1b	Biomimetic economy, recognizing natural limits	188
8.2	Sequences of interconnections in the game of Go	194

Maps

3.1	Diminishing Arctic sea-ice cover	63
4.1	China’s projected strong and smart electric power grid	83
4.2	Asian Super Grid proposal	93
4.3	Desertec proposal	98

Table

7.1	Upswings and downswings in industrial capitalism, 1760–2011	156
