

Illustrations

- 1.1. Equation of time 9
- 1.2. Portable astronomical observatory 11
- 1.3. Mid-nineteenth-century marine chronometer 15
- 1.4. Longitude difference between Harvard College
Observatory and the Royal Observatory at Greenwich 17
- 2.1. Map of local-time differences in terms of Albany time 21
- 2.2. North American railroad accidents, 1840–63 24
- 2.3. Railroad collision near Valley Falls, Rhode Island, 1853 26
- 2.4. “Standard Time,” Boston & Providence Railroad 29
- 3.1. John Locke’s drum chronograph, 1850 41
- 4.1. Washington time balls 48, 49
- 4.2. Boston Fire-Alarm Telegraph Office, 1852 52
- 4.3. Fire-alarm telegraph systems, 1852–1902 58
- 5.1. Dudley Observatory astronomical timekeeper 63
- 5.2. Tompkins Matteson’s “Inauguration of the Dudley
Observatory, August 1856” 69
- 5.3. Time ball on the capitol, Albany 72
- 7.1. Map of proposed railroad time zones, 1869 and 1870 95
- 7.2. Charles F. Dowd’s 1870 map of railroad time zones 99
- 8.1. Western Union time ball, New York City 109
- 8.2. Announcement of Western Union’s New York City
time service 111
- 8.3. P.H. Dudley’s synchronizer clock for railroad time service 113
- 9.1. Comparison of three observatories’ time signals, 1879 117
- 9.2. Naval Observatory mean-time transmitting clock system 118

- 11.1. Standard Railway Time announcement from
Yale College Observatory, 1883 143
- 11.2. Eastern and Central Standard Railway Time zones 145
- 13.1. John A. Lund's clock synchronizer 158
- 13.2. John Oram's Time Indicator for telephone subscribers 164
- 14.1. Telegraphic Time Company's self-winding clock 171
- 14.2. Naval Observatory System of Observatory Time
exhibit at Universal Exposition, Paris, 1889 177
- 15.1. American time-distribution observatories in 1888 182
- 16.1. Self-Winding Clock Company tower at World's
Columbian Exposition, Chicago, 1893 201
- 16.2. Sigmund Riefler's precision astronomical clock 203
