Tables

1.1 College Entry and Completion Rates for the High School Cla of 1982 and 1992 (by 1990 and 2000, respectively) 6

1.2 Predicted Changes in the Probability of College Entry for the High School Classes of 1982 and 1992 10

1.3 Predicted Changes in the Probability of College Graduation f Those Who Entered College Within One Year of Graduating from High School 12

3.1 Traditional Path-Model Estimates of the Effect of Educationa Expectations on Educational Attainment by Age 28 62

3.2 2SLS Regression Estimates of the Effect of Senior Year Educational Expectations on Educational Attainment for Four Race and Sex Groups with Best Friends' Expectations a an Instrument for Respondent's Educational Expectations

3.3 Mean Educational Expectations and Educational Attainment Four Race and Sex Groups and Level of Parents' Education

3.4 Estimates and Bounds for the Average Causal Effect of Expectations on Attainment for Four Race and Sex Groups a Level of Parents' Education 74

3.5 Estimated Correlations Between Error Terms from Panel Dat Models of Educational Expectations in 1980, 1982, 1984, an 1986 85

4.1 Distributions of Payoff Models for the College Entry Decision Tree 122

5.1 Using Bayes' Theorem to Decide Whether to Submit an Article to a General or Specialized Sociology Journal 142

6.1 A Simple Markov Model for the Evolution of Disidentification 189

Figures

1.1 College Entry Rates of Recent High School Graduates, Ages 18–21 8
2.1 Initial Formulation of the Wisconsin Model of Educational Attainment 37
2.2 Lewin's Valence of an Activity as a Function of Its Perceived Difficulty 42
2.3 Number of Articles in *Sociology of Education* That Use the Variable Educational Expectations or Aspirations 45
3.1 A Structural Equation System for the Effect of Educational Expectations on Educational Attainment 60
3.2 Proportion of High School Seniors Who Definitely Expect to Graduate from a Four-Year College 89
4.1 Schematic Representation of the Preparatory Commitment Model of Educational Attainment 102
4.2 A Simple Decision Tree for the College Entry Decision 105
4.3 A Single Stay versus Leave Decision Tree 110
4.4 Payoff as a Linear Function of Prior Preparation 113
4.5 Simulated Values of Prefigurative Commitment for Very Smal Returns to Choosing the Decision Go to College 125
4.6 Simulated Values of Prefigurative Commitment for Small Returns to Choosing the Decision Go to College 126
4.7 Simulated Values of Prefigurative Commitment for Large Returns to Choosing Go to College 127
4.8 Simulated Values of Prefigurative Commitment for Very Larg Returns to Choosing the Decision Go to College 128
5.1 Updating a Beta Prior Distribution with a Binomial Data Likelihood 146
5.2 The Evolution of Commitment in a Labor Market Where the Payoff to a College Education Is Large 153
5.3 Fast Learning for the Stochastic Decision Tree Parameters
5.4 Slow Learning for the Stochastic Decision Tree Parameters

6.2 A Markov Model for Movement Between Identified and Disidentified States, with Supplementary States for Discounti of Performance Evaluations 196
6.3 The Evolution of Commitment for Two Types of Students W Discount Performance Evaluations 201
