

TABLES AND FIGURES

Tables

- 4.1 Discrete-time logit models on career mobility in the *first* period 80
- 4.2 Discrete-time logit models on career mobility in the *second* period 82
- 5.1 Cox regressions on the effects of firm characteristics on direct firm shifts and exits into nonemployment from the firm of December 1989 (the former GDR firm) 107
- 5.2 Discrete-time logit models on the effects of historical period, firm size, and sector on direct firm shifts and exits from firms into nonemployment 110
- 5.3 Cox regressions on the effects of gender and job level in different sectors on direct firm shifts and exits into nonemployment from the firm of December 1989 112
- 6.1 Predictions for employment opportunities after unification 125
- 6.2 Unemployment between 1990 and 1996 129
- 6.3 Transitions from employment to unemployment and vice versa 130
- 6.4 Interaction between gender and cohort for transitions from employment to unemployment and vice versa 132
- 6.5 Percentage of women and men in positions of authority at the end of 1989 and in 1996 135
- 7.1 Class distribution in December 1989, EGP- and GDR-specific class scheme 143
- 7.2 Adopted Wright class scheme for the GDR and class distribution in December 1989 145
- 7.3 Mobility into the state-socialist upper service classes 148
- 7.4 Class structure by overt system loyalty 150

- 7.5 Class positions and distribution in December 1989 and at time of interview 154
- 7.6 Class mobility without job mobility 157
- 7.7 Reproduction and circulation in upper service class positions in the transformation process 161
- 7.8 Social characteristics of upper service classes in 1996/1997 164
- 7.9 “Elite” reproduction and circulation in comparative perspective 166
- 8.1 Rate regression of transition to first birth: relative risks 183
- 8.2 Rate regression of transition to first birth: relative risks, cohort 1971 185
- 9.1 Different kinds of social support before 1989 (GDR) 195
- 9.2 Changes in different types of relationships between the “Time Before 1989” and 1993 202
- 9.3 Relations to child(ren)—binary logistic regressions—odds ratios 205
- 9.4 Relations to siblings and other kin—multinomial logistic regressions—odds ratios 207
- 9.5 Relations to friends and acquaintances—multinomial logistic regressions—odds ratios 208
- 9.6 Relations to coworkers—binary and multinomial logistic regressions, odds ratios 211
- 10.1 Determinants of internal and external control beliefs in 1991/92 224
- 10.2a Causality beliefs in the domain of gainful employment in 1993 225
- 10.2b Agency beliefs in the domain of gainful employment in 1993 226
- 10.3 Impact of career mobility between 1993 and 1996 on causality and agency beliefs in the domain of gainful employment in 1996 230
- 10.4 Impact of perceived control on labor market mobility 234
- 11.1 Stability of occupational position between 1990/1995 and 1995/2000 in East Germany, and between 1988/1993 and 1993/1998 in Poland 248
- 11.2 Determinants of gross hourly earnings (Ln) in main job in the first, fifth, and tenth year of the transformation 252
- 11.3 Overtime rank order correlations of gross hourly earnings (Ln)

- in East Germany (1990–1995/1995–2000) and Poland (1988–1993/1993–1998) 259
- 11.4a Determinants of individual change in gross hourly earnings (main job) in East Germany and Poland 262
- 11.4b Determinants of individual change in gross hourly earnings (main job) in East Germany and Poland 264
- 12.1 Characteristics of jobs in East and West Germany 277
- 12.2 Different types of job mobility in East and West Germany 280
- 12.3 Dynamics of unemployment and re-employment in East and West Germany 282
- 12.4 Move into unemployment, moves into self-employment, downward moves, and upward firm and within-firm shifts 286
- 12.5 Risk of unemployment, moves into self-employment, downward moves, and upward firm and within-firm shifts 288
- 12.6 Move into unemployment, downward moves, and upward firm shifts 290

Figures

- 3.1 Unemployment rates in East and West Germany by gender 55
- 3.2 Number of workers across sectors in East Germany 1989–2003 56
- 3.3 Employment trend in East Germany after 1989 57
- 4.1 Average monthly rate of mobility occurring in the first and second period 72
- 4.2 Comparison of mobility after unemployment and direct shifts 73
- 4.3 Mobility competencies and network resources accumulated before 1990 75
- 5.1 Survival rates in the firm of December 1989 by sectors, December 1989–March 1996 105
- 5.2 Survival rates in the firm of December 1989 by size, December 1989–March 1996 106
- 6.1 Transition to first stable employment corresponding to level of training 137
- 8.1 Transition to first birth, cohorts 1959–61 and 1971, Kaplan-Meier survival curve 178
- 8.2 Transitions to the second child, Kaplan-Meier survival curve 179

- 8.3 Transition to first marriage and interrelation between first birth and marriage, Kaplan-Meier survival curves 180
- 8.4 Reasons for not having any children yet, childless respondents of the cohort 1971 187
- 9.1 (a) Advisors of respondents in personally difficult situations; pre-transitional FRG (West Germany) compared to GDR; (b) Advisors of respondents in personally difficult situations; pre-transitional FRG (West Germany) compared to GDR 197
- 11.1 (a) Change of earnings (gross hourly wage) after first five years of transformation; (b) Change of earnings (gross hourly wage) fifth to tenth year of transformation 257
